

Building of the Semantic Nets for working out OLAP Models

Features ACSN

1. Acquisition and formation of regularities
2. Effective formalization
3. Separation of generalized and particular information
4. Addition of missing substances (solving of incomplete description problem)
5. Semantic net construction mechanism

Application

1. Bank activity (analysis, acquisition of information)
2. Construction of roads, transmission links, geographical objects
3. Analysis, formation and formalization of texts
