

CardiaCare. Mobile System for Arrhythmia Detection

Yuliya Zavyalova, Artem Pogorelov, Alexander Borodin

Petrozavodsk State University
Department of Computer Science

This project is supported by grant KA179 of Karelia ENPI - joint program of the European Union, Russian Federation and the Republic of Finland

13th FRUCT conference
April 22–26, Petrozavodsk, Russia

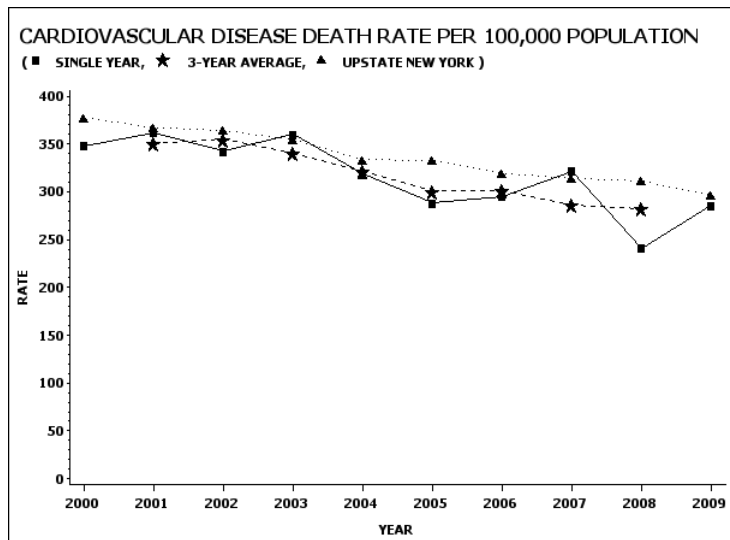

Agenda

- Cardiovascular diseases
- Heart function monitoring devices
- Obtaining and visualising ECG recordings
- Arrhythmia detection
- Conclusion

Cardiovascular diseases

Connection with device

Analog monitors

- Visual assessment
- Delayed treatment
- Subjectivity
- The Human Factor
- Stationarity

Automatic monitoring

- Accuracy
- Efficiency
- Objectivity

- Alive Heart and Activity monitor
- Smartphone
- CardiaCare application

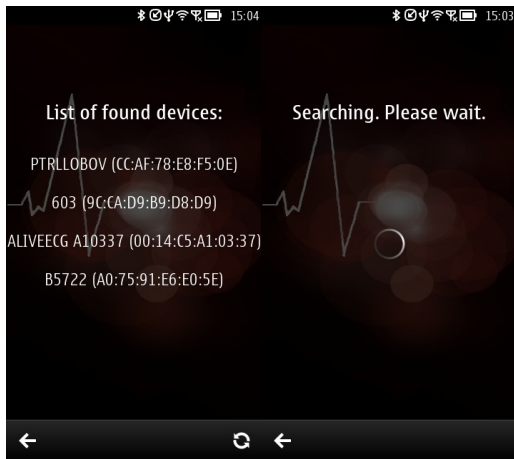

Benefits

- Constant monitoring
- Customizable ECG viewer
- Emergency call
- Ease of Use

Bluetooth selection

Active mode

[online diagramming & design] 

CardiaCare application

Arrhythmias to be detected

- Tachycardia
- Bradycardia
- Sinus Arrhythmia
- First-Degree Heart Block
- Second-Degree Heart Block
- Ventricular Tachycardia
- Ventricular Fibrillation
- Ventricular Flutter

Arrhythmia classification

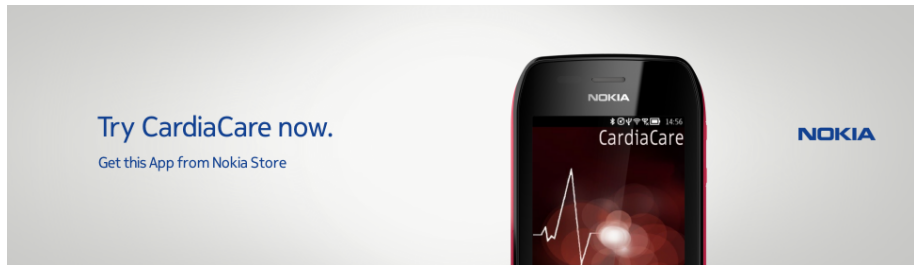

Platform and toolbox

- Qt framework
- QML (GUI)
- Android SDK
- ASP.NET

Future plans

- Support of other platforms and monitors
- Improve the algorithm
- Server side application and database

Thanks for your attention!
